Heilbronn Regional Authorities Building multi-storey carpark
Heilbronn, Germany

The multi-storey carpark at the Regional Authorities Building in Heilbronn has a particularly eye-catching feature — an 85 m long sculpture by the German sculptor Gunther Stilling has been installed across the entire length of one of its external walls. The artist has created numerous works for public spaces, which are on view in many cities in the south-west of Germany. The sculpture on the municipal multi-storey carpark building consists of stainless steel tubes that form an abstract shape. Selux Initio 350 luminaires, unobtrusively installed on the ground, provide an impressive setting for the artwork. These LED lights in special housings, beam light onto the sculpture from below.

project	Heilbronn Regional Authorities Building multi-storey carpark
client	Landratsamt Heilbronn
lighting designer	Süwag Energie AG -Architektonische Stadtraumbeleuchtung- in cooperation with 3L. LICHT-LUX-LUMEN
design	Prof. Gunter Stilling
electrical planning	Ing.Büro für Elektrotechnik: Herbel
photographer	3L. LICHT-LUX-LUMEN GbR

Initio

Initio is a linear LED floodlight designed for the illumination of facades and to highlight specific architectural features, with its narrow beam light distribution onto walls avoiding unnecessary light pollution. Two mounting brackets ensure ease of installation and adjustment of the luminaire makes Initio an ideal lighting tool.
