Station Antwerpen Centraal
Antwerp, Belgium

Each day, some 25,000 travellers and 500 trains pass through Antwerp Central Station, one of the finest railway stations in the world. It is known to locals as the “Railway Cathedral”, mainly on account of its imposing dome. Opened in 1905, the station has been extensively redesigned over the past few years so that the station now operates on three levels, including an underground section.

As part of the renovation measures, its stone station building has been fitted with an elaborate lighting system. In keeping with the building's eclectic style, the imposing station building is now adorned with Olivio accent lighting. With their 14-metre high poles and minimalist shape, the lights ensure a masterful look by day yet without dominating the surroundings.

Olivio

The distinctive Olivio family is a modern, striking, multifunctional urban lighting system, available in three different sizes with interchangeable reflectors for street and accent lighting applications. This flexible lighting system can be equipped with optical accessories such as honeycomb and ring louvres, coloured and elongation lenses offering further effects and control. Olivio Sistema, Candelabra and Floracion poles and brackets provide total freedom of design and flexible planning.
