Grachten Lanterns
Amsterdam, Netherlands

Amsterdam's 'grachten' have long since been the city's most important landmark. These narrow yet navigable waterways wind for over 80 km throughout the city centre, spanned by numerous bridges. Recently the grachten and the entire historical old town were supplied with replicas of the original Kroonlantaarns and Ritterlantaarns. In both lanterns, a specially-developed bevelled secondary reflector ensures asymmetrical light spot expansion to create non-glare, warm white light.

project	Grachten Lanterns
client	Gemeente Amsterdam – Dienst Infrastructuur Verkeer en Vervoer
lighting designer	Bartenbach Lichtlabor
design	Arsis Industrial Design
photographer	Marcus Bollen
