Bus Terminal Hennef Hennef, Germany

In Hennef, even waiting for the bus is fun! The redesigned bus station in this town near Bonn is now illuminated with friendly, bright and economical LED light. Eight rectangular canopies of various sizes were erected for passengers and buses in this station. Basic lighting for the individual shields comprises a total of 160 special waterproof luminaires, which are made from plastic and arranged in pairs. Special LED optics by Selux ensure a symmetrical angle of radiation for the luminaires. LED light strips covering a length of 477 metres in total have been integrated above the plate glass perimeter of this shield-type roof construction.
